

Start

What should we start doing?
What new situations should we adapt to?
What experiments should we try?
What ideas have not been considered?

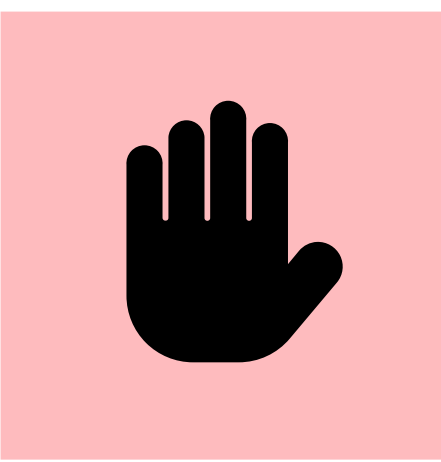

Plan modular structure.

Choose reliable hosting.

Implement secure authentication

Set clear project goals.

Design user-friendly interface.

Stop

What should we stop doing?
What is not working very well?
What is not having the desired outcome?
What is feeling impractical?

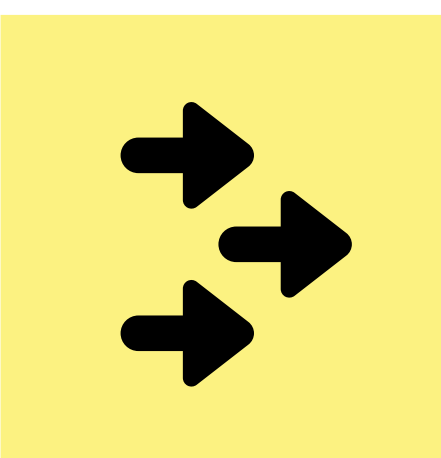

Ignoring security updates.

Over complicating code structure.

Neglecting performance optimization.

Relying on outdated libraries.

Tolerating inefficient database queries.

Continue

What should we continue doing?
What do we like and want to keep?
What do we want to keep trying or testing?
What is helping us make progress?

Regularly update dependencies.

Monitor server performance.

Document code changes thoroughly.

Test for cross-browser compatibility.

Gather user feedback.
